

FRANCISZEK MIELCARZ

Student of SWPS University, Warsaw

ABOUT ME

A Psychology and Computer Science student with experience in interaction design (UX/Chatbots) and recruitment. I combine a psychological perspective with technical skills (Python, R, data analysis) and business process analysis. I am seeking a dynamic work environment where I can utilize my analytical and research skills to develop digital products or optimize organizational processes.

EXPERIENCE

Junior Chatbot Designer

April 2025 - July 2025

Perfectbot.ai

- Designing and optimizing conversational scenarios for clients in the e-commerce and services sectors.
- Analyzing user interaction data (UX Research), which improved chatbots' effectiveness in solving customer issues.
- Collaborating with development teams in the AI solutions implementation process, ensuring brand communication consistency (Tone of Voice).
- Monitoring chatbot performance with live users (collaboration with key clients), ensuring high-quality service.

HR Intern

July 2023 - September 2023

Jeronimo Martins Polska S.A., Wyszaków

- Operational support in managing logistics for recruitment panels for executive candidates.
- Execution of recruitment processes, including active CV selection and candidate screening.
- Conducting market competition analysis, enabling more effective targeting of the desired demographic.

Waiter

May 2025 - December 2025

Lavanda Restaurant, Młochów

- Managing customer relations in a high-pressure environment and ensuring a high-quality customer experience
- Collaborating effectively within the operations team to optimize the guest service process
- Resolving day-to-day issues in stressful situations, which enhanced my communication skills and ability to manage priorities
- Assisting in the organization of special events

EDUCATION

SWPS University, Warsaw

wrzesień 2023- obecnie

Psychology and Computer Science (Full-time studies, Bachelor's degree)

- Specialization: E-health: Internet Interventions.

WYBRANE PROJEKTY I BADANIA

Behavioral Design & Digital Health

- **Somna** (Web-based intervention project): Design of an app supporting sleep hygiene, grounded in behavior change models (Behavior Change Techniques). Execution of a full research cycle (IDIs, surveys) and development of a UX prototype focused on personalized feedback.
- **Ghost Away** (Therapeutic app): Original project for a tool designed to help reduce telecommunication anxiety. Application of exposure techniques and interactive simulations to build user confidence.
- **Every Drop Counts** (Behavioral project): Development of a strategy to change water consumption habits based on Construal-Level Theory (Trope & Liberman). Optimization of pro-environmental communication to enhance the audience's sense of agency.

Business Analysis & UX Research

- **MotoFlow** (Business Process Analysis): Conducting a business analysis of a car service based on a Case Study (methods: SWOT/TOWS, KANO, MoSCoW, User Stories). Optimization of staff work paths (As-Is / To-Be) to increase operational efficiency.
- **Smart Home Insights** (UX Research): Researching user needs for IoT systems. Conducting qualitative research (ethnomethodology, IDI), creating personas and user journey maps (User Journey Mapping).
- **Sunseeker** (Smart Plant Pot): Designing an intelligent IoT pot. Conducting qualitative research (IDI, ethnomethodology) and translating user insights into product functional requirements.

AI & Digital Innovations

- **Fridgely** (Proprietary Food Management App): Development of a "Smart Fridge" app utilizing barcode scanning (integrated API). Features include a virtual fridge, expiration date notification system, and AI integration for generating recipes based on available products. The project was implemented using the vibecoding model (AI-assisted development).
